*SSHIB is
a decentralized,
robust Meme ecosystem
and fully community-based or-
ganization.*

SSHIB

SSHIB is a decentralized, robust Meme ecosystem and fully community-based organization. How would a cryptocurrency project change if it was 100% community-based? While DeFi literally includes the definition of decentralization, it refers to the economic position, not its internal hierarchy. SSHIB makes that change, we are an experiment built by our decentralized spontaneous community This will be the beginning of the revolution. The community is completely open and transparent, saving the cost of repeated verification, and this high trust mechanism makes SSHIB potentially a new low-cost, community-based block model that achieves a breakthrough in all aspects.

Projects built on community participation are the frontier we want to explore in the future, freeing us to discover new ways of solving problems and building inextricable connections with others as we move away from rigid social structures and traditional ways of thinking.

Community-based projects are more than just a change of pace; they are a way to practice radical acceptance of others. When success depends on the shared strength of the individuals who make up the collective, we are forced to change our perspective and stay with those around us all the time. the SSHIB Meme ecosystem is our way of recognizing the importance of breaking the long-established formulaic model of success and building a path to freedom and creativity.

A community is made up of hundreds, and even thousands of interconnected identical perceptions, by studying the avid followers who are drawn to SSHIB, we realize that true power comes not from a single perspective, but from coordinated collaboration.

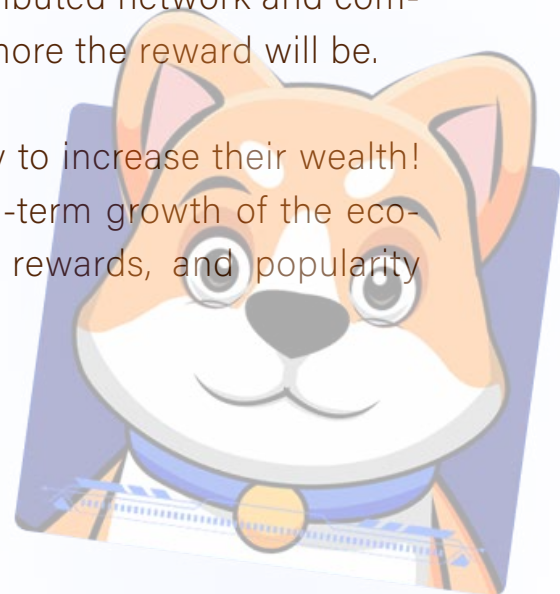

Fair Distribution

SSHIB was created in the sense of a fairer and more equitable blockchain, where trust is paramount in the crypto market. This means complete transparency not only in the community support and development of perfection, but also in any security efforts.

SSHIB comes from the SHIBA community and does more fair distribution on top of it. SSHIB is highly free, fully decentralized, and supported by its many communities of enthusiasts. Free, developed and frank communication between community supporters is encouraged, so that everyone who wants to join the community can understand and even participate in every step of SSHIB's growth! Multiple, independent and free team efforts in development, community self-management and so on, are strongly encouraged.

SSHIB has a total volume of 10 trillion and will never be issued in increments. 50% of the tokens will be credited into PancakeSwap at launch, and the remaining 50% will be airdropped to all SHIBA communities in the community. All users in the community will be at the same starting point. One of its key features is its decentralized usage reward mechanism. For each active user transaction, only 2% of the SSHIB Token reward is granted to the holder's decentralized wallet, thus promoting a healthy distributed network and community usage. the more SSHIB token is used, the more the reward will be.

SSHIB gives all participating users the opportunity to increase their wealth! The decentralized community is fostering the long-term growth of the ecosystem, which will yield real use cases, greater rewards, and popularity beyond any temporary trends.

How to buy

SSHIB was built on the low-fee Binance Smart Chain and we want to cover more and larger communities.

SSHIB can be found in the growing list of CEX on PancakeSwap.

SSHIB is a more decentralized experiment and we encourage the community to use DEX for swaps, which will be listed continuously on the CEX platform subsequently, expanding to every CEX version.

SSHIB Economic Model

SSHIB is a kind of BEP20 token with a total supply of 1,000 trillion. one of its key features is decentralization. SSHIB pioneered the concept of transaction-as-destruction. Each transaction of SSHIB eco-system will destroy 5% of the tokens to ensure a certain degree of value for the coin held by all users in the eco-system. SSHIB smart contract has successfully passed top security audits, it further enhances the confidence of the community. SSHIB is a fully decentralized and community-driven project.

SSHIB Products

SSHIB is a fully community-driven organization and all products will be operated in a communization way. We are about to many community-based products in the future, which will all be completed step by step.

Products that will emerge in the SSHIB ecosystem in the future will include:

SSHIB Swap is a distributed platform, cryptocurrency and protocol that promises a new evolution towards decentralized finance (DeFi). A decentralized exchange with custom features that allows holders to trade with each other without any centralized point of failure, like any transactions among different kinds of ERC-20 tokens.

SSHIB Swap is not just for the DeFi space, but for the crypto industry as a whole. We are committed to building the best decentralized ecosystem in the world, our tokens are the seeds that germinate in the SSHIB ecosystem and SSHIB swap is a way that they take root and gradually grow indefinitely.

SSHIB NFT is used as a fixed asset within the subsequent SSHIB GameFi, which can be held and collected to increase its value. NFT also can be sold or staked in the market. Hodl NFT will give you a greater revenue in the game, and the rarer it is, the greater the revenue will be. It is also an kind of digital collectible artwork that can be traded on Opensea.

SSHIB NFTs have many different characteristics, each one has its different level of rarity, and some combinations can be extremely rare.

SSHIB GameFi

Nowadays, GameFi is still booming, and SSHIB will continue to expand its territory and enter the GameFi field at a later stage. SSHIB GameFi is also highly decentralized, with all assets within the game belonging entirely to the player, creating a completely decentralized and absolute domain for the majority of players.

SSHIB Metaverse

The SSHIB Metaverse is a true virtual world that covers game characters, props, etc. The NFTs associated within it in terms of minting, collecting, earning, and governing will be a model for the infinite development of the blockchain metaverse.

Like Decentraland and The Sandbox metaverse, LAND represents a limited number of digital properties in the SSHIB Metaverse, with 153,154 parcels allowing each property to form a unique NFT under the ERC-721 protocol. Ownership allows the owner to design and operate the land themselves, or to resell it in the marketplace.

As a community-driven virtual Metaverse, SSHIB Metaverse builds a decentralized virtual game world around the NFT. By purchasing assets such as real estate in the ecosystem, players are able to corroborate the metaverse resources in SSHIB Metaverse, as well as mint NFTs in SSHIB Metaverse and use them for trading on their own, have partial autonomy in the game universe, and create various activities to form a diverse metaverse world.

SSHIB Community

● *Phase I - Launch*

1000 Holders

Website Launch

GoinGecko Launch

3000 Telegram Members

CoinMarketCap Launch

6000 Holders

● *Phase II - Growth*

6,000 Telegram Members

Website Optimization

Planning SSHIB Product

25,000 Holders

150,000 Telegram Members

● *Phase III - Expansion*

SSHIB Swap (DEX Exchange)

Initial CEX List (Huobi, Billaxy, Hoo)

45,000 Holders

● *Phase IV-Listing and Launch*
